

## POLE MOUNT

The Pole Mount configuration allows a CS-DUO to mount on a microphone stand that is already being used on stage, reducing stage clutter and eliminating the expense of purchasing dedicated stands for personal mixers.

The MT-1 is compatible with pole diameters between 3/8" to 1 1/4". This allows the MT-1 to work with a wide variety of microphone, music and percussion stands.

### Before you begin, locate these features on the MT-1:

1. 2x Threaded knobs (1 3/4" length, 1/4" - 20 thread)
2. 1x Removable V-Clamp piece
3. 2x Captive thumbscrews (thread into CS-DUO)

### To attach the MT-1 and CS-DUO to your mic/music stand pole:

1. Loosen the threaded knobs to the point where the V-Clamp can swing freely.
2. Insert the mic/music stand pole between the V-Clamp and the back of the MT-1.
3. Tighten the threaded knobs evenly until the MT-1 is fastened tightly to the pole.
4. While holding the CS-DUO, slide the CS-DUO down the mount so the back wall of the CS-DUO catches the alignment surface of the MT-1.
5. Still holding the CS-DUO, center it on the MT-1 and thread the thumbscrews into the CS-DUO by hand. If permanent attachment is desired, the thumbscrews can also accommodate Flathead and Phillips screwdrivers.
6. Route cables through cable management openings.

# THREAD MOUNT

The Mic Stand Thread Mount configuration allows a CS-DUO to mount on a dedicated microphone stand. This mounting method is perfect for musicians that don't require other stands for microphones or music.

positions on the MT-1.

Four captive thread holes on the bottom side of the CS-DUO allow the personal mixer to mount in two different

## Before you begin, locate these parts of the MT-1:

1. Large circle opening on the bottom side of the mount
2. 1x 5/8" - 27 nut (secured to MT-1 with V-Clamp screw).
3. 2x Captive thumbscrews (thread into CS-DUO)

## To attach the MT-1 and CS-DUO to your mic stand:

1. Align the large circle opening on the bottom side of the MT-1 with the top of the microphone stand.
2. Secure the MT-1 by threading the 5/8" - 27 nut until it is finger tight.
3. To firmly lock the MT-1 in place, hold the microphone stand pole with one hand while turning the MT-1 with the other hand.
4. Locate the two captive thread holes on the bottom side of the CS-DUO personal mixer that are closest to the front panel. These are the recommended mounting connections on the CS-DUO for this configuration.
5. While holding the CS-DUO, align the MT-1 captive thumbscrews with the CS-DUO captive thread holes mentioned in step 4.
6. Still holding the CS-DUO, thread the thumbscrews into the CS-DUO by hand. If permanent attachment is desired, the thumbscrews can also accommodate Flathead and Phillips screwdrivers.
7. Route cables through cable management openings.
